

## MINDFUL OF THE MARKET, IFI CREATES “ESPRESSO”: competitive by nature.

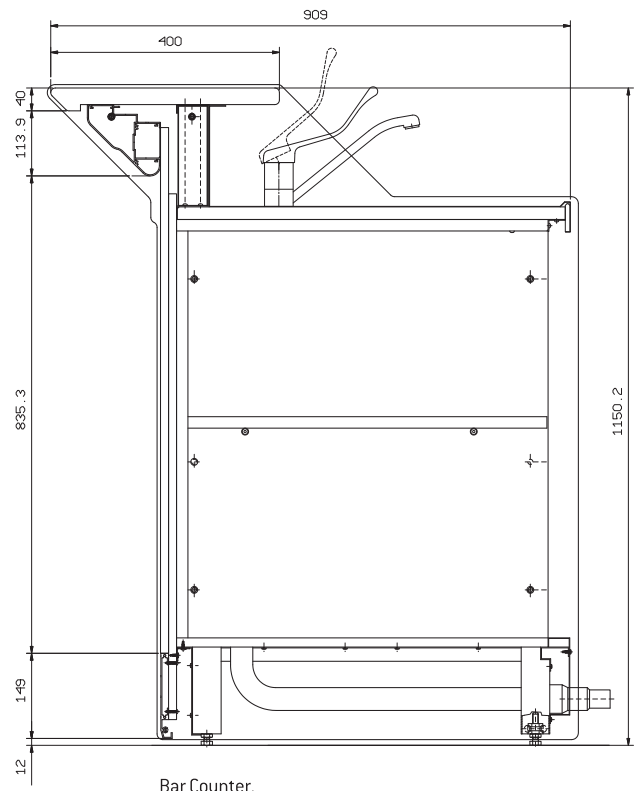

IFI presents **ESPRESSO**, an attractive and flexible line, designed to lend a touch of freshness to any venue, and define its spaces with simplicity and effectiveness. ESPRESSO is the new “entry level” of the range: its plusses with respect to competitors have been leveraged through the inclusion of new elements, enabling unprecedented low-cost configurations. With ESPRESSO, IFI proposes high quality furnishing with a very aggressive price, capable of measuring itself and winning on the grounds of an excellent quality/price ratio, the *leitmotiv* of our times.

ESPRESSO is a project by architect Valter Panaroni, in collaboration with the R&D department of IFI.

Espresso offers all the modules traditionally included in IFI's range, plus some specific configurations of technological components.

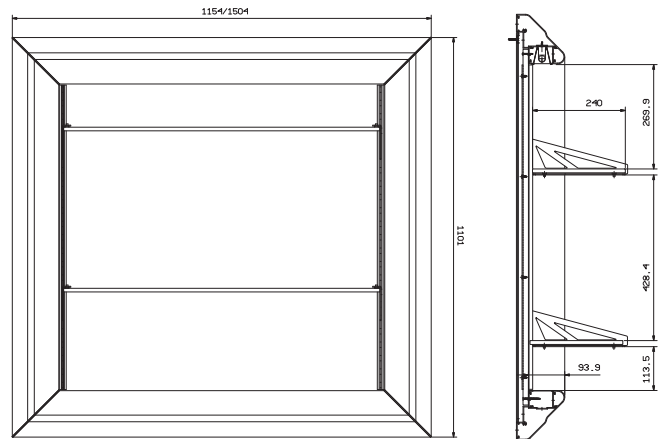

### TECHNICAL CHARACTERISTICS BAR COUNTER

- Bar counter of traditional 1151 height, limited depth, and 40 cm. countertop in silver-coloured postformed material.
- Front surfaces are all on one level, and can be fitted with different catalogue-listed laminated finish.
- End and intermediate panels are provided in the standard colours and modes of IFI range furnishings.
- The strip under the countertop and the frame of the back shelving are made of extruded aluminium profile, covered in melaminic pattern.
- The kick-plinth is made of extruded anodized aluminium profile.

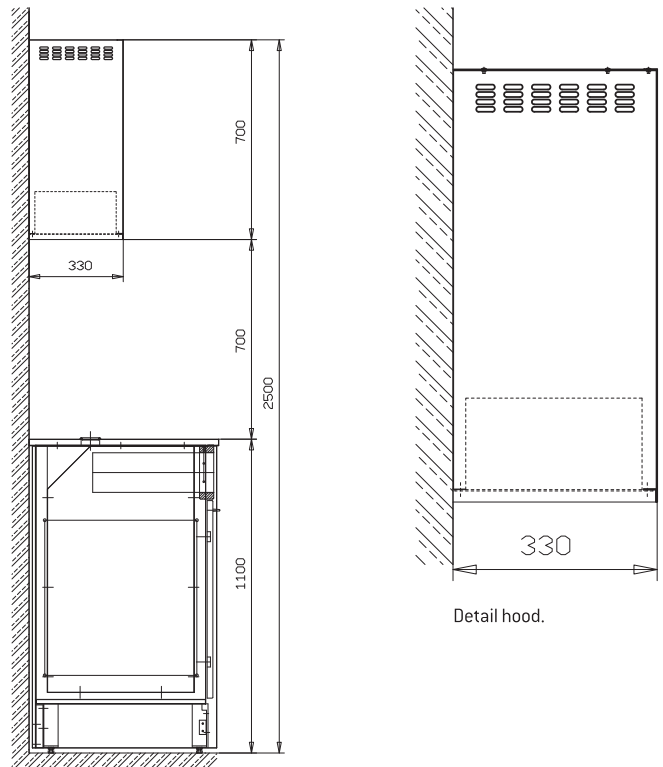

## BACK SHELVING

- **Back shelving** includes a wooden support panel, to be hung on the wall behind the counter, finished with a mirror or laminated (to match the finish of the counter) joined together by a frame made of extruded aluminium profile, covered with melaminic pattern (matching that of the countertop's support and having the same cross-section). Back shelving is available in the lengths: 1154 and 1504 mm.
- Glass **shelves** are anchored to the structure by means of height-adjustable aluminium brackets with a rack system; back-lighting is provided by a fluorescent tube fitted into the upper horizontal section.
- The **coffee machine** zone is equipped with a parallelepiped-shaped hood, made of sheet metal, to be hung directly on the wall.
