

NEW WASTE HOPPER WITH FLAP DOOR

IFI designs and launches the new waste hopper with flap door: comfortable for daily use, suitable for the differential collection, competitive in price.

The waste hopper with flap door is conceived to solve the problem of the traditional hopper that, during the daily use often remains open, due to laziness or commodity, leaving waste in the clients' view.

Thanks to the flap door, that always returns to starting position, and to the waste container hidden by the sliding door, the premises will always remain tidy and clean to the client's eyes.

Flap door and sliding door below are realised in AISI 304 stainless steel BA shiny finish. The waste container, also realised in stainless steel 2B finish, is equipped with a practical handle and rests on two stainless steel guides for easy extraction.

The waste hopper with flap door can be installed inside a 50 cm neutral unit of either the bar counter or the back counter in P55 and P63 metal. Cannot be installed on the ennobled back counter.

You can find the prices of the new waste hopper inside the IFI reserved area: www.ifi.it/extranet
