

FOR CUBIKA, AKTIVA AND CLASS GELATO, corner modules 45° with air condensing unit.

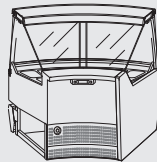

Starting from now, gelato display cases **Cubika, Aktiva and Class** in the corner modules A2/45° - CE and ETL versions - are available with standard air condensing unit. Up until now, both versions CE and ETL have been available only with water condensing unit.

The air condensing unit works just like in all the other air cooled displays cases and allows the operator to eliminate the water consumption.

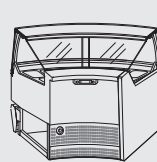

Furthermore, for CE-certified display cases the air/water mix condensing unit is available.
