

IoT Remote Manager

Thanks to IoT Remote Manager, an innovative service introduced by **Ifi**, customers and dealers can remotely monitor and manage all refrigerated products. A technological solution designed to improve people's wellbeing.

People-centric innovation

A dedicated site allows easy access from any Smartphone, Tablet, PC. With just a LAN connection, your technician will be able to adjust product settings and in some cases solve eventual failures remotely.

What are the advantages for Ifi dealer?

- Give confidence to customer during the sale;
- Give added value to Ifi offer by distinguishing it from competitors;
- Gain customer's loyalty: the sale doesn't finish with the installation of products in their premises but continues with the constant monitoring of their parameters;
- Receive malfunction alarm notifications;
- In case of malfunctions learn the causes in advance in order to:
 - assess whether an onsite intervention is necessary, thus optimising the work of technical staff
 - work on site quickly and effectively;
- Draw up technical assistance contracts with customers as an additional source of business

What are the advantages for the customer?

- **CONSTANT MONITORING OF DISPLAY CASES**
- **TECHNICIAN TRAINED BY IFI**
- **DAILY HACCP REPORT**
- **MONITORING AND MANAGEMENT of some functions and parameters of refrigerated products directly FROM PCS, TABLETS or SMARTPHONES:**
 - Turn on/off display case lighting.
 - Turn on/off refrigerated products.
 - Start defrosting.
 - Lock the control panel so nobody can change the parameter setting.
 - Change temperature and humidity settings.
 - Receive malfunction alarms.
 - Benefit from a fast and effective assistance service and save valuable time.
